

WEBSITE CHANGE REQUESTS — FOR DEVELOPMENT

AEM Energy Website Update Brief

Change requests for the live AEM Energy website, prepared for the developer. Each item below specifies what to change and how.

Prepared for: Development · Project: AEM Energy (Victorian Energy Upgrades) · Deadline: **First half of Saturday (today)**

Overview

Six changes to implement on the live AEM Energy website, plus the overall design direction. Details for each follow.

Quick checklist

- ☐ **Product photos** → convert to a carousel/slider (one carousel per product).
- ☐ **Background watermark** → add the AEM Energy logo, subtle/faded.
- ☐ **Remove "Hot Water"** as a separate section → keep only "Heat Pumps" (covers both). Carry its stacking line into Heat Pumps.
- ☐ **Rename "LED"** → "Commercial LED – NBB (Non-Building Based)" and update the description.
- ☐ **Add "Distillo Water Filtration"** → new standalone product, no government rebate badge.
- ☐ **Keep the "Accredited Person"** trust section, prominent and unchanged.
- ☐ **Design direction** → blend the two reference sites (see Design Direction section).

Final product line-up after these changes

For reference, the product set on the site after the changes below should be:

Product	Government rebate badge?
Solar	Yes (VEU)
Heat Pumps (now also covers hot water)	Yes (VEU)
Battery	Yes (VEU)
Air Con	Yes (VEU)
Commercial LED – NBB (Non-Building Based)	Yes (VEU)
Distillo Water Filtration	No — standalone product

Changes to implement

1 Product Photos → Slider / Carousel

CURRENT

Static product images.

CHANGE

Convert product photos into a sliding carousel so users can swipe/click through product images. Use **one carousel per product** (the user swipes through multiple images of the same product).

NOTES

- Mobile: swipe-enabled. Desktop: arrows and/or dot indicators.
- If a product has only one image, show it without slider controls.
- Lazy-load images for performance.
- Ensure the carousel sits cleanly above the background watermark (see change 2) and remains readable.

2 Background Watermark

CHANGE

Add the AEM Energy company logo as a subtle watermark in the website background. Keep it light/faded so it does not interfere with readability.

NOTES

- Low opacity, sitting behind page content.
- Must not reduce text contrast or interfere with the product carousels or any content legibility.
- Logo file supplied separately (AEM Energy rising-sun logo).

3 Remove "Hot Water" — Keep Only "Heat Pumps"

CHANGE

Heat Pumps and Hot Water are essentially the same product line. **Remove the standalone "Hot Water" section entirely.** Keep only "Heat Pumps", which now covers both heating/cooling and hot water.

IMPORTANT — CARRY THIS CONTENT ACROSS

The current "Hot Water" card contains a stacking message: *"The clearest three-layer stack — VEU + STC + Solar Victoria."* This is a strong selling point and applies to heat-pump hot water systems. **Move this "three-rebate stack" message onto the Heat Pumps card** so it isn't lost when Hot Water is removed.

REFERENCE

See the supplied screenshots — the "Hot Water" card (water-drop icon, "up to \$2,900", marked for removal) and the "Heat Pumps" card it merges into.

4 Rename "LED" → "Commercial LED – NBB (Non-Building Based)"

CHANGE

Rename the "LED" section to **"Commercial LED – NBB (Non-Building Based)"**. This is specifically for eligible non-building-based commercial lights only. Update the description accordingly.

DESCRIPTION MUST CHANGE TOO (NOT A LABEL-ONLY SWAP)

The current description ("*A quick VEU win for homes — and high-volume for business*") refers to homes — this no longer fits. Rewrite the description so it reflects **eligible non-building-based commercial lighting only** (i.e. commercial outdoor / non-building lighting), not residential.

NOTE

This remains a VEU-rebated product — **keep its rebate badge**. Only the name, scope, and description change.

5 Add "Distillo Water Filtration" Product

CHANGE

Add a new product section for **"Distillo Water Filtration."** This product is **NOT part of the VEU or Solar Victoria program**. Present it clearly as a standalone product.

⚠ No rebate badge on this product

Distillo has **no government rebate**. Do **not** show a rebate/VEU badge, indicative-rebate value, or any government-scheme language on this section. If reusing an existing product card as a starting point, build it from a non-rebate version — do not copy a VEU product card, or the rebate badge and scheme text will carry over by mistake. Users should not be led to expect a rebate on this product.

PLACEMENT

Developer's discretion on where it sits in the layout.

6 Keep "Accredited Person" Section

CHANGE

The section showing **"Victorian Energy Upgrades – Accredited Person"** with the tagline "*The accredited team that handles your entire upgrade*" is approved. **Keep it prominent — do not bury it**. This is a trust signal.

REFERENCE

See the supplied screenshot — the circled "*Victorian Energy Upgrades · Accredited Person*" hero section.

Design Direction

The overall look and feel for the AEM Energy site.

The final website should be a **mixture of these two reference sites**:

Reference	What it brings
aussiegreenmarks.com.au (competitor — established, VEU accredited)	Professionalism: clean layout, testimonial-heavy, established/credible feel.
aussieecomarks.com.au (AEM's own existing brand site)	Product clarity: simpler, product-focused presentation.

The blend

Study both sites. The AEM Energy site should feel like a blend — **the professionalism of Aussie Greenmarks with the product clarity of Aussie Ecomarks.**

Note on the deadline

Deadline: first half of Saturday (today).

The **functional changes** — product carousel, background watermark, removing Hot Water / merging into Heat Pumps, renaming LED to Commercial LED – NBB, adding the Distillo section, and keeping the Accredited Person section — are achievable within today.

The **design direction** (matching the blended feel of the two reference sites) is more iterative by nature and may extend beyond today as it is refined. Suggest prioritising the functional changes for the deadline, with the design-feel blend progressing in parallel.

End of change-request brief.
